MVTL News & Updates: Legionella Testing Service

New Service Introduction

MVTL is very pleased to announce that it is now offering legionella analysis for non-potable water systems. The pending implementation of ASHRAE rules increases the need for certified laboratories capable of meeting the CDC ELITE requirements for testing legionella.

ASHRAE testing requirements?

Implementation of the new ASHRAE standard will increase the focus on legionella monitoring in building water supply systems. An essential element of your legionella monitoring service for building owners will be use of a CDC approved laboratory. There are less than 50 approved labs nationwide, and even fewer commercial operations servicing water treatment companies. MVTL is the only contract lab in the upper Midwest approved by the CDC.

Why turn to MVTL for these services?

MVTL has been providing high quality analytical services since 1951. We offer services 365 days per year, and have developed electronic reporting formats to streamline reporting of results. With the addition of legionella testing, AWT members can rely on MVTL for their microbiological and chemical testing needs.
